new energy 2009

issue/page

COVER

Green landscape	1/20
The EU Parliament has a vision for a new energy order. It's a roadmap to a Europe with a new face.	
"At least 20 per cent"	1/30
Members of EU Parliament Mechthild Rothe, Claude Turmes, Werner Langen and Jorgo Chatzimarkakis are – nearly – content.	
Mostly talk, little action	1/36
Too many stepped on the brakes at the UN climate conference.	
Tying the right knots	2/16
Europe lacks joint power network.	
"We can do it right now"	2/19
Eddie O'Connor campaigning for his vision of a supergrid.	
New rules	2/22
The EU internal energy market to get a boost from grid growth.	
The keys to the solar fab	3/72
All kinds of companies are entering the photovoltaics market via turnkey production lines.	
"We set the standards"	3/79
says Peter Fath, CEO at Centrotherm, a manufacturer of turnkey solar fabs.	
Serial production to the top	3/80
Abu Dhabi's solar division has set up a turnkey line.	
Trouble-free with robots	3/83
Kuka, an automotive supplier, plans to make equipment that will speed up solar production.	
Built-in solar	4/72
Until recently, building-integrated PV arrays were marginal. But as costs drop and the solar market grows, such special solutions are in greater demand.	
Solarissimo	4/84
In 2009, Italy will be the second biggest European solar market behind Germany.	
Efficiency race	4/88
The race for the most efficient solar collector is on.	
Hot mirrors	5/70
Before the plans for Desertec can even get started, thousands of megawatts of concentrated solar power plants will be up and running in Spain and the U.S. An overview of global activity.	
The carbon diet	6/34
The global climate is in danger. The 1-ton CO2 society could be the answer. But getting there will be tough, as new energy discovered in practice.	
"Flying leaves people speechless,"	6/41
warns Hans Hertle, the inventor of Germany's best known carbon calculator, and he explains how people can nonetheless help protect the climate.	
Fight for the skies	6/46
The climate debate is heating up in the U.S. Will Obama succeed in pushing through a federal law?	
Canada's dark side	6/50
The exploitation of oil sands is driving up Canada's greenhouse gas emissions.	

For years, Australia has refused to lower its carbon emissions. Under Kevin Rudd's administration, it now hopes to have 20 percent renewables and a carbon trading system.

ENERGY NEWS

China: hundreds of solar companies in crisis?	1/06
New Chinese wind factory, GE supplies gears	1/07
USA tops wind, Spain tops solar in 2008	1/07
Obama has understood	1/08
Denmark: EUR 103 million for electric mobility	1/09
Greece promotes solar	1/09
Transatlantic solar power research	1/10
329,000 wind energy jobs across Europe	1/10
Wind giants resolve technology dispute	1/10
France: new wind power remuneration	1/11
AWEA demands restructuring of the PTC	1/11
New Zealand ditches climate protection goals	1/12
41,1 per cent solar efficiency record from Germany	1/12
Coal still controversial	1/13
Renewables agency IRENA established	1/13
Biodiesel: No cash no splash	1/13
UK: More offshore than onshore	1/14
VDE study on storing green power	1/14
Winwind expands capacity	1/16
156-MW wind park with Black Sea view	1/16
Siag in joint venture in Egypt	1/16
Spain: wind slacking off	1/17
EWEC: wind meet at the Mediterranean	1/18
Renewable energy annual conference – ee09	1/18
More than 300 gigawatts of wind power projected for 2013	2/06
All snaked out	2/06
Ontario greening	2/07
Renewables law for Australia	2/07
Solar hot spot in western India	2/08
A record PV year	2/08
BtL production delayed	2/09
Japan supporting solar power again	2/09
Moscow sets green power target	2/10
First Solar with low-cost record	2/10
Shell: no money for wind	2/11
Cost blowout I offshore test field	2/11
Accioa No. 2 in wind	2/12
New European wind growth target: 230 gigawatts by 2020	2/12
Sixteen percent more renewables	3/06
Grid to be expanded	3/06
Australia postpones emissions trading	3/06
Hydropower stores wind energy	3/07
Italy: back to the atom	3/07
Spain: a register for everyone	3/08
Latvia promotes wind power	3/08
China raises its targets for renewables	3/09
UK increases offshore compensation	3/09
GWEC: Wind Power Works	3/10
EU wants new “zero-energy” buildings	3/12
Baltic Sea region: a renewables pioneer	3/12
France has ambitious solar plans	3/12

South Africa adopts fixed rates	3/12
Pilot project with the Chancellor	3/13
EU stimulus packages for energy projects	3/13
850 megawatts of wind power for Chile	3/14
“We want business students to get familiar with renewables”	3/14
Mac Renewables	3/16
The fast food chain plans to make its restaurants sustainable.	
Emissions trading to cost industry less	4/06
Windy Zafarana	4/06
Eligibility for cash grants in US	4/06
Battle for climate change law in US	4/07
G8 summit sets new targets	4/07
Britons have low feed-in tarif	4/07
Here comes the sun in China	4/08
Alpha Ventus is ready to go	4/08
100 percent wind energy worldwide	4/09
British energy (r)evolution	4/10
Electricity in the Highlands	4/10
Floating Siemens turbine	4/11
Overshoot	4/11
Radiating pellets	4/12
Trading in electricity around the Baltic	4/12
PV repairs	4/13
European biomass conference	4/13
EREC: Crisis, climate change, conflict over Lisboa	4/14
EREC: Time to implement the European Renewables directive	4/14
EREC: Certificates for renewable building technicians	4/15
EREC: EUR five billion for innovative renewable energy	4/16
EREC: Renewable Energy Conference ahead	4/16
Carbon storage blown off	5/06
Un petit peu carbon tax	5/06
China goes offshore	5/06
Election turbulence	5/07

EREC: Renewable energy technology projects first	5/14
EREC: Buildings directive	5/15
EREC: Policy information exchange platform	5/15
Feed-in tariff for California	6/06
Slovakia wants a little wind	6/06
New targets and tariffs in China	6/06
Japan`s new climate policy	6/07
A boost for India`s solar industry	6/07
New grid for 90 percent renewables	6/08
Italian wind farms confiscated	6/08
Debate about biofuel emissions	6/09
Standards for wind turbine technicians	6/09
EU wrangles about carbon tax	6/10
Offshore-Connection ready for German Bard	6/10
Movements in solar technology	6/11
EREC Policy Conference: 80 percent renewables by 2050	6/12
New mandates for wind and solar	6/13

The ultimate wind velocity monitor.....	6/13
Eurelectric remains committed to traditional energy.....	6/14
Latin America expands biofuel business.....	6/14
EREC: 2010 – What’s ahead in Brussels?.....	6/16
EREC: 3 rd European Renewable Energy Policy Conference.....	6/17
EREC: (R) enewables 24/7.....	6/17
New buildings to be nearly zero energy by 2020.....	6/18

ENERGY POLITICS

“Clear message to Asian nations”	1/39
Ottmar Edenhofer hopes for a transatlantic carbon market.	
Turkish sunrise	3/18
Photovoltaics may finally get off the ground.	
Scottish rebels	3/20
Edinburgh refuses London’s nuclear policy.	
Energetic about green power	3/24
MEP Mechtild Rothe is retiring.	
Europe regroups	4/18
The changing political stage in the European Parliament after the elections.	
My house, my car, my IRENA	4/22
The new International Renewable Energy Agency is moving to Abu Dhabi. We discuss how that happened.	
From Kyoto to Copenhagen	4/26
In December, a decision is to be reached in Copenhagen about the future of climate protection. But preparations are not moving along.	
Long road	5/16
The EU’s Strategic Energy Technology Plan must help fulfill the technological requirements for the switch to renewables.	
Countdown for Copenhagen	5/20
There is little time left to reach a decision at the world climate negotiations.	
Climate barometer	5/22
China is climate killer #1. But the giant refuses to accept binding limits to emissions.	
Climate barometer	5/26
India has declared war on climate change. But will the country practice what it preaches?	
Attempting the impossible	6/20
Although Berlin’s center-right government, which has close ties to large power providers, announced a one-piece energy policy, it simultaneously made agreements to expand both renewable and fossil fuel plants.	

Country markets

Number one in North America	6/22
The province of Ontario has passed feed-in rates for renewables and set far-reaching goals for green energy.	
“We have something very unique.”	6/27
says CanWEA president Robert Hornung about the opportunities and difficulties that the wind sector faces under Ontario’s new Green Energy Act.	

Offshore inland	6/28
Covered with forest, Sweden will soon also have to be covered with wind turbines if it is going to reach Stockholm’s ambitious climate targets. Sweden is already a leader in bioenergy, both for electricity and wood heat.	
“We have no capacity problems.”	6/32
says Sture Larsson technical director of Svenska Kraftnät.	

BUSINESS

Smaller morsels	1/40
VC/PE investors prefer diet food.	
The number four	1/44
Siemens: A journey through a corporate universe going green.	
“We want to help”	1/46
says René Umlauf, CEO of the Renewable Energy division, about Siemens’ role in the crisis.	
Four wind newcomers	1/52
A quartet of turbine makers joined Germany’s manufacturers.	
Public equity funds	2/24
Hoping for late-stage deals.	
Solar democrats	2/28
Wagner & Co ranks as one of the industry’s showcase companies.	
Wanted: developers	3/26
M & A are increasingly focusing on the end of the value chain.	
New clothes for the sun	3/30
The solar sector is taking off its party clothes and donning more somber attire.	
China in springtime	3/34
The People’s Republic has brought forth 1,000 solar firms.	
Gigawatts on the waiting list	3/38
Chinese market leader Suntech is taking advantage of the slow market to secure resources.	
“Winner of the crisis”	3/42
is the title the founder of Suntech, Zhengrong Shi, gives his company.	
Private investors reluctant	4/30
... unless you have access to a fund.	
Managers brace themselves	5/30
Fund managers are looking for ways to benefit from the economic recovery. But if there is a downturn, they do not want to be exposed to risk.	
The MW Cup	5/34
Iberdrola Renovables has become the world’s largest renewables operator with more than 10 gigawatts installed.	
Hi Igor!	5/40
Bard Engineering is almost there. This year, the German manufacturer will begin laying the foundation for its offshore wind turbines.	
“We have worked hard with Unicredit,”	5/42
Bard’s managing director Heiko Ross comments on financing, vertical integration – and a lack of grid connections.	
Stimulus funds boost lending	6/58
A few projects vie for a smaller amount of equity, leaving the supply –demand balance roughly the way it was before the crisis.	

Little to celebrate	6/62
Banks are still reluctant to sign loans, making it hard to finance wind farms. But sometimes development banks can help.	
Siemens goes solar	6/66
First wind, now CSP. Siemens has paid a large sum for Solel and now hopes to become the market leader.	
“It’s a perfect fit,”	6/67
says Rène Umlauf, Director of the renewable energy division at Siemens, of the acquisition.	

RENEWABLE ENERGIES

Second life	3/44
In The Gambia, the first wind turbine in West Africa has been connected to the grid.	
Fata climata	3/50
Abu Dhabi has the highest per capita energy consumption in the world. Now, the model city of Masdar is to change all that.	
Growth Indian style	4/34
The wind industry is waiting for a new national policy.	
Windless land	4/37
Photovoltaics as an answer – a good business climate for wind energy remains theory in Czekia.	

WIND POWER

No market crash	1/56
German wind market proved more stable than expected.	
Spanish toss	1/60
A new renewable energy law is a main theme for Europe’s leading wind power developer in 2009.	
Blades with growing pains	1/64
Raising questions about the components’ growth.	
Fast-moving Obama	2/34
New record for the US wind power market in 2008.	
First turbines in the wind corridor	2/38
Mexico could be a wind power leader with systematic promotion.	
No strategy	2/44
Italy is Europe’s third biggest wind market. But aimlessness is preventing a “dolce vita”.	
Attractive new technologies	2/48
Trend toward permanent magnet synchronous generator turbines.	
Closing the service gap	2/52
Survey shows that non-affiliated service providers don’t solve all operator problems.	
The upside of the downturn	2/62
Wind industry component suppliers preparing for more growth.	
Finding the right bite	2/72
With innovation and a new investor a turbine brake maker aims to stay ahead.	
Bigger, better, sleeker	3/54
Wind firms are presenting improvements at Hannover Messe.	
“Something has to be done”	3/58
says Enercon’s executive director Aloys Wobben when asked about climate protection.	

A sporting mix	3/60
Germany has a new law for the quality of electricity.	
Flops and prospects	3/64
Wind energy is only progressing slowly in Poland.	
“Herculean task”	3/70
Charles W. Ebinger about the expansion of the grid in the US.	
Poseidon and the perfect plan	4/40
Germany has also begun offshore wind. The industry is learning to come to grips with the whims of the sea.	
Load plans for low-pressure areas	4/48
Day-ahead forecasts for wind energy production are improving, belying the charge that wind power cannot be planned.	
Factor 10	4/52
China’s wind industry is growing – too quickly. And international providers cannot keep up with domestic firms.	
“This industry’s profitability will drop.”	4/56
warns Suzlon’s Ted Liu.	
“We don’t have any cases.”	4/59
explains Winergy’s Patrick de Greve.	
“Our 2-MW machine will be produced this year.”	4/60
promises Gamesa’s Jesus Zaldua.	
“Competition is fierce.”	4/64
Danke Yu, CFO at China’s turbine manufacturer Goldwind, comments on industry expectations.	
Jobs, jobs, jobs	4/66
Financial crisis went largely unnoticed at the trade show in Chicago.	
“Obama is behind us.”	4/70
believes Dennis Bode, CEO of the American Wind Energy Association (AWEA).	
Windpower Western	5/48
The world’s largest wind farms are found near Sweetwater, Texas. The only limit is the grid.	
“Everyone is trying to find the next western Texas.”	5/51
Steve Trenholm, COO of Eon Climate and Renewables, comments on progress at the Roscoe wind farm and his firm’s future plans.	
Refreshing sea wind	5/54
Horns Rev 2, Greater Gabbard, Alpha Ventus – the growth of offshore wind farms is enormous despite the crisis.	
Ask the weatherman	5/60
Predicting the earning power of a wind park site is an art, and forecasts often differ widely.	
Spinning big wheels	5/64
Germany’s new research cluster Fraunhofer IWES is to pave the way for the future wind power market.	
Changing ships	6/68
The wind sector needs better crane ships to set up offshore turbines in ever deeper water.	
Islands of insight	6/72
Germany’s three research platforms Fino I-III present results.	

SOLAR POWER

Solar prices dropping	1/68
Supply exceeding demand?	
Thin-film chase	1/72
A technology developing fast. How great is its potential?	
Solar heating cooling off	1/76
The low oil price curtails solar thermal sales expectations.	
Production here, research there	1/80
Taiwan and Singapore: Two approaches to building solar industries.	
Printed power	2/76
Nano solar cells to be generating low-cost energy by 2015.	
Won and died	2/80
Spain's photovoltaics industry installed far too much.	
No shit	2/82
Louis Palmer drove around the world in a solar car and became the poster child of mobility.	
Leading Spanish solar	3/86
Castile-La Mancha will get all of its electricity from renewables.	
The end of the solar eclipse	5/82
Up to now, solar power has not played a big role in India. But New Delhi has announced a target of 20 gigawatts by 2020.	
Who's not playing fair?	6/76
At PV Sec and Hamburg, the German solar industry had a few innovations to show for itself despite the fierce competition from China.	
"China is our workbench,"	6/80
says Martin Green, chief solar researcher at the renowned University of New South Wales in Sydney, Australia.	
Inverting Business	6/84
SMA leads the pack with mass-produced inverters.	

BIO POWER

All shook up	1/82
German biogas shares have been a source of little joy. Now the question is which companies will survive?	
From maize to algae	1/86
US ethanol producers see venture capitalists shifting their focus to new fuel sources.	
Making the grade	2/86
European environmental and social standards for imported biofuels in the pipeline.	
Huge future for pellets	2/90
Europe dominates the world wood pellets market.	
German alcohol diet	3/90
Ethanol production is stagnating.	
Coal cookers	4/90
Researchers and engineers are working on pilot systems that make coal out of biomass. A status report from Germany.	
Only electric	5/86
At the IAA, biofuels were a marginal topic. The focus was electric mobility.	

Competing for alcohol **5/90**
Research is being conducted on cellulose ethanol and other types of biofuels all over the world.

Biofuels off to sputtering start **6/86**
Second-generation biofuels have not been making headlines lately. Choren will be launching production in 2010 – after quite a delay.

Green coal **6/90**
Half of all wood pellets were used to generate electricity in central power plants in 2008. This trend is increasing demand.

GEO POWER

Hot front-runner **1/82**
Indonesia has the biggest geothermal energy potential.
